Received 28 September 2011; accepted 11 October 2011

Key indicators: single-crystal X-ray study; $T = 296$ K; mean $\sigma(\text{O-C}) = 0.004$ Å; R factor = 0.026; wR factor = 0.070; data-to-parameter ratio = 17.2.

The fused bis-butterfly-shaped title compound, $[\text{Fe}_4(\text{CS}_4)_4(\text{CO})_{12}]$, possesses an orthothiocarbonate (CS_4^{4-}) ligand that acts as a bridge between two $\text{Fe}_2(\text{CO})_6$ units. A short intramolecular S···S contact [2.6984 (8) and 2.6977 (8) Å] occurs in each $\text{S}_2\text{Fe}_2(\text{CO})_6$ fragment.

μ_4 -Orthothiocarbonato-tetrakis[tricarbonyliron(I)](2 Fe-Fe)

Y.-C. Shi, H.-R. Cheng, L.-M. Yuan and Q.-K. Li

Comment

The activation and cleavage of selected bonds of small molecules by transition metal complexes is one of the challenging subjects of recent researches. CS₂ has been shown to undergo a variety of reactions with transition metals, including insertion and disproportionation, and there is a growing interest in the activation of CS₂ from catalytic and biological points of view. The cleavage of the C—S bonds is often observed in various transition metal complexes in which chemistry has been explored for the hydrosulfurization of fossil products. In these complexes, the S²⁻ ion derived from the C—S bond scission functions as a bridging ligand to link metal ions and metal cluster fragments and is generally of use in various cluster growth processes (Mathur *et al.*, 2009).

Interestingly, the reaction of Et₃P/CS₂ and Fe₃(CO)₁₂ in THF under inert atmosphere at room temperature leads to the formation of a novel complex (Scheme 1). The molecular structure of the novel complex (Fig. 1) consists of two butterfly Fe₂(CO)₆ units connected by a bridging CS₄ ligand in axial C—S bond fashions similar to the related complex Fe₂(CO)₆(μ -S)₂CH₂ (Shaver *et al.*, 1979). The Fe—Fe bond lengths are 2.4949 (5) and 2.5007 (5) Å and close to 2.485 (1) Å in Fe₂(CO)₆(μ -S)₂CH₂, but slightly shorter than 2.511 (1) Å in the complex Fe₂(CO)₆(μ -SCH₃)₂ (Table 1) (Ortega-Alfaro *et al.*, 2004), the corresponding C—S bond lengths are 1.827 (2), 1.830 (2) and 1.830 (2), 1.837 (2)°, respectively, which are longer than those in the complex Fe₂(CO)₆(μ -SCH₃)₂. For each S₂Fe₂(CO)₆ butterfly core, the S—C—S bond angle is 95.10 (10) and 94.73 (9)° and close to 94.55 (3)° in Fe₂(CO)₆(μ -S)₂CH₂ (Table 1). As compared with 2.744 (1)–2.773 (1) Å in Fe₂(CO)₆(μ -SCH₃)₂, the S···S distance (2.6984 (8) and 2.6977 (8) Å) indicates an intramolecular short contact in each S₂Fe₂(CO)₆ butterfly core.

Experimental

A THF solution of Et₃P/CS₂ (1 mmol) and Fe₃(CO)₁₂ (1 mmol) under inert atmosphere is stirred for 24 h at room temperature. After removal of the solvent, the mixture was purified by chromatography on silica gel with dichloromethane-petroleum ether (v/v, 1:3) as eluant to give the red-orange solid. Single crystals were grown from ether solution of the title compound.

Figures

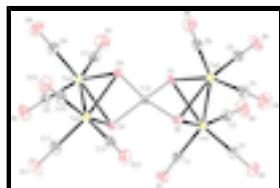

Fig. 1. The molecule of the title compound, showing the atom-labelling scheme. Displacement ellipsoids are drawn at the 30% probability level.

Special details

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > \sigma(F^2)$ is used only for calculating R -factors(gt) etc. and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
